

Ref. no.: ODG 20220801-170

August 1, 2022

The Hon. Anthony Albanese
Prime Minister
The Commonwealth of Australia

Excellency,

We hope this letter finds you healthy and well during these important times of historic challenges and opportunities.

As you may know, the Global Green Growth Institute (GGGI) was launched ten years ago on a strong foundation of support from the Republic of Korea—its Host Country—and a cohort of likeminded countries leading the way against the climate crisis. Thanks to this staunch support, GGGI was able to celebrate recently its 10-year milestone as a treaty-based intergovernmental organization. After ten years, GGGI can now boast 43 Members, 37 country programs, and an increase in the total number of resource partners by nearly sixfold and earmarked funding by ninefold, to an expected USD 70 million in 2023.

We believe the actual outcomes and impacts delivered for GGGI's Members is what ultimately counts, and we are most proud to have helped reduce an estimated 170 million tons of CO₂ equivalent, to create 1.2 million green jobs, to avoid deforestation (or reforest) of 14 million hectares. These outcomes were achieved through the mobilization of more than USD 7 billion in green and climate investments, and the adoption of 228 policies, Nationally Determined Contributions, and Long-Term Low Emission Development Strategies by Members with GGGI support.

However, despite GGGI's stellar performance and growth and the consistent satisfactory assessments of donor Members, core contributions to GGGI—the most flexible source of funding to maintain effectiveness, agility, and innovation—have declined to an expected USD 15 million in 2023. GGGI considers this a critical risk to its performance in the years to come and has consulted its Host Government on the desirability to increase core funding for GGGI.

We are pleased that the Korean government has agreed to lead a new Core Replenishment Drive for GGGI to mobilize an additional USD 20 million per year in new core funding for GGGI from 2024 onwards. We hope your government will fully support this initiative to help GGGI accelerate green growth and fight climate change throughout the world. Please find enclosed a supporting document on the GGGI Core Replenishment Drive.

On behalf of GGGI, we extend our sincere appreciation for the support during the first ten years, and we look forward to working together for the next ten years and beyond.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Ki-moon Ban".

Ban Ki-moon
President and Chair
8th Secretary-General of the United Nations

A handwritten signature in purple ink, appearing to read "Frank Rijsberman".

Frank Rijsberman
Director-General

We believe the actual outcomes and impacts delivered for GGGI's Members is what ultimately counts, and we are most proud to have helped reduce an estimated 170 million tons of CO₂ equivalent, to create 1.2 million green jobs, to avoid deforestation (or reforest) of 14 million hectares. These outcomes were achieved through the mobilization of more than USD 7 billion in green and climate investments, and the adoption of 228 policies, Nationally Determined Contributions, and Long-Term Low Emission Development Strategies by Members with GGGI support.

However, despite GGGI's stellar performance and growth and the consistent satisfactory assessments of donor Members, core contributions to GGGI—the most flexible source of funding to maintain effectiveness, agility, and innovation—have declined to an expected USD 15 million in 2023. GGGI considers this a critical risk to its performance in the years to come and has consulted its Host Government on the desirability to increase core funding for GGGI.

We are pleased that the Korean government has agreed to lead a new Core Replenishment Drive for GGGI to mobilize an additional USD 20 million per year in new core funding for GGGI from 2024 onwards. We hope your government will fully support this initiative to help GGGI accelerate green growth and fight climate change throughout the world. Please find enclosed a supporting document on the GGGI Core Replenishment Drive.

On behalf of GGGI, we extend our sincere appreciation for the support during the first ten years, and we look forward to working together for the next ten years and beyond.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Ki-moon Ban".

H.E. Magdalena Andersson
Prime Minister
The Kingdom of Sweden

Excellency,

We hope this letter finds you healthy and well during these important times of historic challenges and opportunities.

As you may know, the Global Green Growth Institute (GGGI) was launched ten years ago on a strong foundation of support from the Republic of Korea—its Host Country—and a cohort of likeminded countries leading the way against the climate crisis. Thanks to this staunch support, GGGI was able to celebrate recently its 10-year milestone as a treaty-based intergovernmental organization. After ten years, GGGI can now boast 43 Members, 37 country programs, and an increase in the total number of resource partners by nearly sixfold and earmarked funding by ninefold, to an expected USD 70 million in 2023.

We believe the actual outcomes and impacts delivered for GGGI's Members is what ultimately counts, and we are most proud to have helped reduce an estimated 170 million tons of CO₂ equivalent, to create 1.2 million green jobs, to avoid deforestation (or reforest) of 14 million hectares. These outcomes were achieved through the mobilization of more than USD 7 billion in green and climate investments, and the adoption of 228 policies, Nationally Determined Contributions, and Long-Term Low Emission Development Strategies by Members with GGGI support.

However, despite GGGI's stellar performance and growth and the consistent satisfactory assessments of donor Members, core contributions to GGGI—the most flexible source of funding to maintain effectiveness, agility, and innovation—have declined to an expected USD 15 million in 2023.
